University Children’s Hospital Zurich

Profile

**Leading pediatrics centre**
The University Children’s Hospital in Zurich is not only the largest paediatric clinic in Switzerland but also one of the leading centres for paediatric and youth medicine in Europe. Which is why patients come to us from all corners of Switzerland and abroad. The well-being and swift recovery of sick children is what we strive for every day. Besides undertaking the normal tasks of a university hospital, we also train doctors to become specialists in their field. And we know that standing still is the equivalent of stepping backwards. Therefore our children's hospital houses the first and as yet only research centre in Switzerland that is solely dedicated to paediatric research.

**Areas of specialisation**
The University Children’s Hospital Zurich is the largest pediatric centre for many services including heart problems, bone marrow transplant and burns. With our comprehensive service range of 32 medical sub-specialisations, we are on par with the largest children’s clinics in the world. In fact, our medical and surgical clinic’s service range is typical of larger university hospitals. For a complete list of services, visit our website at www.kispi.uzh.ch.

Region

Zurich is situated 408m above sea level at the lower (northern) end of Lake Zurich, nestled between the summits of Üetli Mountain to the west and Zurich Mountain to the east. The historic city centre stretches along both sides of the river Limmat which flows from Lake Zurich, first to the north before slowly curving westwards. The University Children’s Hospital Zurich is situated in the centre of the residential district of Hottingen which extends from above Stadelhofen train station all the way to Zurich Mountain.
